DETAILED ACTION

Notice to Applicant

1. This communication is in response to the Appeal Brief filed 19 September 2007. Claims 1-6 are pending.

Allowable Subject Matter

2. Upon further consideration, and further in view of Applicant's most recent remarks in the Appeal Brief filed 19 September 2007, claims 1-6 are allowed. The following is an examiner's statement of reasons for allowance:

Claims 1-6 are directed towards booking and issuing a reserved travel ticket by a user using a personal computer and a local area network and an issuing terminal that is connected to an external reservations system. During the booking process a user at a personal computer connected to a net server on a local area network requests a ticket booking to the net server. The net server sends home page addresses (URLs) of the external reservation systems to the personal computer via the local area network; the URLs are stored and displayed on the personal computer. The user selects a URL of an external reservation system, then connects via the Internet to a website of the external reservation system and completes a booking through the website of the external reservation system without the aid of the net server. The user then sends the booking data to the network server, which sends it to an issuing terminal connected to external reservation systems. The issuing terminal issues the booked ticket after communicating with the selected external reservation system

3. While the closest prior art of record, Schoolery et al., (U.S. Patent 5, 570,283) discloses a user communicating regarding a booking from a personal computer over a local area network and the Internet to an external reservation systems and addressing a user's ticket booking commencement request to a net server from the personal computer, it fails to disclose or fairly suggest completing a booking through the website provided by the selected external reservation system without the aid of a net server. It also fails to teach the net server sending home page addresses (URLs) of the external reservation systems to the personal computer via the local area network;

4. The Bloch article, "The Impact of Electronic Commerce on the Travel Industry" June 1996, teaches allowing buyers and sellers to communicate directly over the Internet and teaches consumers having direct access to reservation networks through a personal computer but fails to teach the particular combination of elements and functions as described above.

5. In addition, Garback (U.S. Patent 5,237,499), teaches a computerized travel planning system including a consumer connecting with a personal computer to an airline reservation system accessed with a modem over a wide area network, but fails to teach the particular combination of elements and functions as described above. Therefore, the claims distinguish over the prior art.

6. Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement for Reasons for Allowance."
